# Regional Situational Awareness Network – San Diego County

Using FirstWatch, authorities in the San Diego Operational Area developed a Regional Situational Awareness Network (RSAN) Trigger, enabling them receive automated real-time notifications of specific events as they occur. This RSAN trigger is designed to allow participating agencies to receive actionable and/or informational alerts based on criteria which is important to them. RSAN can alert on events such as: major structure fires, HazMat / HazMed Incidents, explosions, location of explosive or radiological device, Airport Alerts (air craft crashes or other emergencies), major wildfires, hostage situations and other events defined by the participating agencies. RSAN alerts help officials stay apprised of events outside their jurisdictions that may impact their communities providing a degree of real-time data interoperability necessary for public safety agencies.
