# Geo-Fence Sentinel Trigger – Oceanside Police

Oceanside Police Detectives experienced a rash of robberies, all within a particular region of the city. They asked FirstWatch if they could be notified whenever a robbery was reported within the defined hot-zone. Using FirstWatch, the task force drew a "virtual" geographic fence around the focus area and setup a Trigger to immediately and automatically notify key task force members any-time a robbery report was received from within the identified hot-zone.
