

Visualize your data, your way with FirstWatch customized reports

Reports

FirstWatch customers can leverage our real-time data capabilities through the addition of Custom Reports, developed against the same data that FirstWatch is already pulling and analyzing from your CAD, ProQA, ePCR, RMS, phone, and hospital data. Our reports offer users the ability to define specific and unique case views of data in a way which makes sense for your organization.

Through the use of SQL Reporting Services, we can automate the delivery of report data to defined organization users and groups. The reports can be exported or delivered in various formats including Excel, Word, PDF, HTML, XML, CSV, and TIFF. Similar to our triggers, we provide the ability to define what you want to see, how you want to see it, and who gets to see it.

Real-Time data from your CAD, ProQA, ePCR, RMS, Phone, Nurse Triage, Billing, or Hospital ED systems
